

Medication Reconciliation is a three-step process, whereby the team works in partnership with patients and families to generate a Best Possible Medication History (BPMH), identifies and resolves medication discrepancies, and communicates a complete and accurate list of medication to the patient and their next care provider.

Medication Reconciliation As a Strategic Priority

- ✓ An NS Health Medication Reconciliation Policy is in progress. Please continue to follow your former District Medication Reconciliation policies until the NS Health policy is in effect.
- ✓ Medication reconciliation relies on a team based approach involving partnership with patients and family.
- ✓ There is an interdisciplinary coordination team leading an organizational plan to sustain medication reconciliation.
- ✓ Evidence is documented that team members, including prescribers, who are responsible for medication reconciliation are provided with relevant education
- ✓ Compliance with medication reconciliation is monitored through patient chart audits.
